                                                                                                                                                                                                                                                                                                                                                                                        Clone distribution: MGC clone distribution information can be fou through the I.M.A.G.E. Consortium/LINL at: http://image.llnl.gov Series: IRAK Plate: 84 Row: i COlumn: 5 This clone was selected for full length sequencing because it passed the following selection criteria: Hexamer frequency ORF analysis, GenomeScan gene prediction
This clone has the following problem: frame shifted.

Peptide
                                                     Protein
The invention relates to novel genes (AB092553-AB092607) and proteins (ABD62013.4BP62153) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant) agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast on ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune throughtie, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial schaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   LILLLQPPARGHAHDGQALSTDLGVYTCEASNRLGTAVSRGARLSVAVLREDFQIQPRDMV 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     267
AAY12914-68 represent human secreted proteins. The polypeptides and their corresponding polynucleotides are useful for preventing. treating or ameliorating medical conditions, e.g. by protein or gene treating or ameliorating medical conditions, e.g. by protein or gene therapy. Pathological conditions can also be diagnosed by determining the presence of mutations in the new polyneptides in a sample or by determining the presence of mutations in the new polynectides. Specific uses are described for each polynucleotide, based on which tissues they are most highly expressed in, and include developing products for the diagnosis or treatment of cancer, immune disorders, infection, inflammatory disorders, skin disorders, tumours, atherosclerosis, restenosis, autoimmune disorders, Alzheimer's disease, peripheral neuropathies, trauma, spinal cord injuries, allergy, hematopoietic disorders, astehma, immunodeficiency diseases, AIDS and transplant rejection. The polypeptides are also useful for identifying their
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     87
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         VATNSAGHRESRAARVSIQEPQDYTEPVELLAVRIQLENVTLLNPDPAEGPKPRPAVWLX

The present sequence representing human TAMGO 310 form 2 is isolated from cDNA clone Jthxe181e12 from a human astrocyte cDNA library. TAMGO 310 is 1 of 4 movel human transmembrane proteins.

CC library. TAMGO 310 is 1 of 4 movel human transmembrane proteins.

CW which also includes TAMGO 315 (AAU00498-AAU00499), TAMGO 437 (AAU00502)

CM and TAMGO 480 (AAU00503). The nucleic acids encoding these proteins

CC are useful as modulating agents in regulating a variety of cellular

CC processes and can be used to express the proteins in a host cell in

CC pene therapy applications. Antisense nucleic acid molecules and

CC expression vectors containing the TAMGO nucleic acids are also described.

CC Diagnostic assays can be used to detect genetic alterations in the TAMGO

CD contein and to identify, compounds that bind to or modulate activity

CC of the TAMGO proteins. Anti-TAWGO antibodies are used diagnostically to

CM conticor protein levels in tissue as a clinical testing procedure.

CM and proteins may be used to diagnose, treat and monitor disorders of the

CA and proteins may be used to diagnose, treat and monitor disorders of the

CA and proteins may be used to treat call prolliferative disorders (e.g. cancer),

CM and neurological disorders e.g. Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          QDSPPQILVHPQDQLFQGPGPARMSCQASGQPPTIRWLLNGQPLSMVPPDPHHLLPDGT 118

The present invention describes secreted and transmembrane polypeptides and their polynucleotides. The nucleotide sequences are useful as sources of probes, primers, for chromosome mapping, and for generation of antisense sequences. They can also be used to create transgenic animals. The proteins can be used to treat a variety of diseases and disorders, depending on their function. Diseases that may be treated include blood coagulation disorders, cancers and cellular adhesion disorders. They may also be used to raise antibodies. AA233891 to AA234338, and AAY41685 to AAY41774 represent polynucleotide and polypeptide sequence given in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New secreted and transmembrane polypeptides and their polynucleotides, useful for treating blood coagulation disorders, cancers and cellular adhesion disorders -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Chen J;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           186 VATNSAGHRESRAARVSIQEPQDYTEPVELLAVRIQLENVTLLNPDPAEGPKPRPAVWLS 245
                                                                                                                                                                                                                                   AAC78458 to AAC78599 represent polynucleotide and EST (expressed sequence tag) sequences which encode secreted or transmembrane PRO polypeptides. The PRO polynucleotides and polypeptides have cytostatic activity. The polynucleotides and polypeptides can be used for detecting the presence of PRO polypeptides in samples, for linking bioactive molecules to cells and for modulating biological activities of cells, using the polypeptides for specific targeting. The polypeptide targeting can be used to Kill the target cells, e.g. for the treatment of cancers. The polypeptide pairs provide specific targeting of bioactive molecules to cells. AAC78600 to AAC78987 represent PCR primers and probes used in the isolation of the PRO polynucleotide sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    66 LLLLQPPARGHAHDGQALSTDLGVYTCEASNRLGTAVSRGARLSVAVLREDFQIOPRDMV

The present invention relates to the isolation of novel human PRO polypeptides, and the polynucleotide sequences encoding them. The PRO polypeptides are secreted and transmembrane proteins. The PRO polypeptides are useful for detecting other PRO polypeptides, for linking bloactive molecules to cells expressing PRO polypeptides, for linking bloactive molecules to cells expressing PRO polypeptides, and for for identifying agonists or antagonists. The bloactive molecule maybe a toxin, radiolabel or antibody, and causes apprepriate molecule maybe a toxin, radiolabel or antibody, and causes bloactive molecule maybe a toxin, radiolabel or antibody, and causes apportive molecule maybe a toxin, radiolabel or antibody, and causes apportive molecule maybe a toxin, radiolabel or antibody, and causes apportive molecule maybe at toxin, radiolabel or antibody, and causes are adiac insufficiency, nervous system disorders, kidney disorders, cardiac insufficiency, nervous system disorders, and wound healing. The polymucleotide sequences encoding PRO polypeptides are useful as hybridisation probes, in chromosome and gene mapping, in the generation of antisense RNA and DNA, in the preparation of PRO polypeptides, for analysis of individuals with genetic disorders, and in gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   121 AVVGEQFTLECGPPWGHPEPTVSWWXDGKPLALQPGRHTVSGGSLLMARAEKSDEXTYMC

These were isolated from expressed sequences tags (ESTS). They can be used to stimulate cell growth, to regulate haematopolesis e.g. to treat aplastic anaemia, to help tissue regrowth e.g. in burn treatment, to regulate the immune system e.g. to treat multiple sclerosis, to regulate activin or inhibin e.g. to treat infertility, to regulate haemostasis or thrombolysis e.g. to treat stroke and cancer, to screen for drugs, to treat inflammatory conditions e.g. rheumatoid arthritis, and to treat nervous system disorders e.g. Parkinson's disease. The present sequence is a protein of the invention.
                                                                                                                                                                                                                                                                                                                  Human, antianaemic, vulnerary, antiinflammatory, immunomodulator,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention relates to endothelial cell-specific molecule 4 (ECSM4), and the polynuclectide sequences encoding it. The ECSM4 proteins are useful for imaging vascular endothelium in the body of an individual, and for diagnosing and treating a proliferative disease or condition involving the vascular endothelium (preferably, neovasculature) such as cancer, psoriasis, diabetic retinopachy, neovasculatures or memorrhagia. The ECSM4 proteins are also useful in the manufacture of diagnostic or prognostic agent for such conditions. The proteins are also useful for detecting endothelial damage or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  activation, detecting a tumour or tumour neovasculature, cardiac disease, or endometriosis by detecting the amount of ECSM4 present in a sample. The polynucleotide sequences encoding ECSM4 are useful in gene therapy for treating a hypoxic condition such as cancer, cardiac disease, endometriosis or atherosclerosis and in the manufacture of medicaments for treating the above disease. The sequences are useful for modulating angiogenesis in an individual. The present sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention describes primer sets for synthesising 5602 full-length cDNBA defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 3'-end sequence, where the oligonucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence; at least 15 nucleotides and the combination of the 5'-end sequence; at least 15 nucleotides and the combination of the specification. The primers sets can be used in antisense therapy and particularly full-length cDNAs. The primers are also useful for the principal particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length AAH13632 represent human coll sequences; and AAH13632 to AAH13632 represent human amino acid sequences; and AAH13632 to AAH13632 represent coligonucleotides, all of which are used in the exemplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           9

                                                                                                                                   The present sequence represents a human protein kinase/protein phosphatase. The polypeptides are expected to participate in signal transduction in cells. The kinase phosphatases are connected with intracellular signalling pathways. Antisense oligonucleotides and compounds identified by screening (agonists or antagonists) can be used to treat human or animal disorders associated with the expression or function of the protein. In addition, the polypeptides may be used
                                                                 New genes encoding protein kinase and protein phosphatase, useful for identifying modulators which can be used to treat human or animal disorders associated with the expression or function of these enzymes
                                                                                                                                                                                                                                                                                                                                                                                                                     148 AVVGEQPTLECGPPWGHPEPTVSWWKDEKPLALQPGRHTVSGGSLLMARAEKSDEGTYMC

The present invention relates to endothelial cell-specific molecule 4 (BCSM4), and the polynucleotide sequences encoding it. The ECSM4 proteins are useful for imaging vascular endothelium in the body of an individual, and for diagnosing and treating a proliferative disease or condition involving the vascular endothelium (preferably, neovasculature) such as cancer, psoriasis, diabetic retinopathy, atherosclerosis or menorrhagia. The ECSM4 proteins are also useful in the manufacture of diagnosit or prognostic agent for such conditions. The proteins are also useful for detecting endothelial damage or activation, detecting a tumour or tumour neovasculature, cardiac consistence, or endometriosis by detecting the amount of ECSM4 present in a sample. The polynucleotide sequences encoding ECSM4 are useful in gene therapy for treating a hypoxic condition such as cancer, cardiac disease, endometriosis or atherosclerosis and in the manufacture of medicaments for treating the above disease. The sequences are useful for modulating angiogeness in an individual. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     LLLQPPARGHAHDGQ-ALSTDLGVYTCEASNRLGTAVSRGARLSVAVLREDFQ1QPRDMV 120

T85 cDNA (see AAV66278) was identified in a human foetal brain cDNA library using secreen designed to identify genes encoding protein having a functional signal sequence. T85 nucleic acids and polypeptides of the invention are useful as modulating agents in regulating a variety of cellular processes. They can be used for identifying a variety of cellular to modulate the activity of the polypeptides (claimed). They can also be used in screening assays, detection assays (e.g. chromosomal mapping, tissue typing, forensic biology),
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           predictive medicine (e.g. diagnostic assays, prognostic assays, monitoring clinical trials, and pharmacogenomics), and methods of treatment (e.g. therapeutic and prophylactic) e.g. for neurological

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   원
                             The present sequence representing human TANGO 330 form 1 is isolated from cDNA clone jthAa060g22 from a human adrenal gland cDNA clone jthAa060g22 from a human adrenal gland cDNA library. TANGO 330 is 10 f 4 novel human transmembrane proceins which also includes TANGO 315 (AAU00498-AAU00499), TANGO 437 (AAU00502) and TANGO 480 (AAU00503). The nucleic acids encoding these proteins care useful as modulating agents in regulating a variety of cellular processes and can be used to express the proteins in a host cell in gene therapy applications. Antisense nucleic acid molecules and carpostic assays can be used to detect genetic alterations in the TANGO nucleic acids and to identify compounds that bind to or modulate activity compounds to protein levels in tissue as a clinical testing procedure. TANGO proteins Anti-TANGO antibodies are used diagnostically to monitor protein levels in tissue as a clinical testing procedure. TANGO 330 shows homology to human Roundabout. TANGO 330 nucleic acids and proteins may be used to diagnose, treat and monitor disorders of the adrenal cortex e.g. hypoadrenalism, hyperadrenalism, and neoplasia. They can also be used to treat cell proliferative disorders (e.g. cancer), and neurological disorders e.g. Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 80 QFTLECGPPWGHPEPTVSWWKDGKPLALQPGRHTVSGGSLLMARAEKSDEGTYMCVATNS 139

The polypeptide is useful as an immunogenic composition for eliciting in a mammal an immunogenic response directed against any of the purified pulpeptide, or the antibody that binds to this polypeptide, is useful for treating cancer. The polypeptide is also useful for identifying compounds that binds to a naturally processed class I or class II MRC-binding polypeptide. The polypeptides and polymoclecides are particularly useful for treating or preventing myeloma, colon cancer, gastric cancer, adenocarcinoma, sarcoma, melanoma, clymphoma or leukaemia. These are also useful for screening agents for treating the above mentioned diseases. This sequence represents an expenses depotein tag (EPT) isolated from human tissue for translational
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Note: This sequence does not appear in the printed specification but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New polypeptides (e.g. kinases, phosphatases, proteases, transporters, cytoskeletal proteins, receptors or transcription factors), useful for treating cancer, e.g. colon cancer, gastric cancer, sarcoma, lymphoma
                                                                                                                                                                                                                                           Translational profiling, expressed protein tag; EPT; kinase, phosphatase; protease; protease inhibitor; transporter; cytoskeletal protein; receptor; transcription factor; cancer; MHC; major histocompatability complex; myeloma; colon cancer;
                                                                                                                                                                                                                                                                                                                                              gastric cancer; adenocarcinoma; sarcoma; melanoma; lymphoma;
leukaemia.

This invention describes novel Robo (roundabout) polypeptides, involved in nerve guidance which heve been isolated from Drosophila sp., C. elegans, human and murine samples. The products of the invention can be used to raise anti-Robo antibodies, which can be used to modulate cell function or morphology. The Robo polymucleotides and fragments are useful as probes and primers and for production of the Robo polypeptides. The probes and primers are also useful in screening assays.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           117

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
